1971 Excellence in Microbiology EQA 2021

Measles and mumps IgG serology

EQA intended for the evaluation of qualitative and quantitative assays testing for measles IgG • mumps IgG

- Participants are evaluated on the qualitative interpretation of results (positive/equivocal/negative) based on the specifications of their assays
- Individual reporting for each marker (no penalty for not testing both markers)
- Suitable for all serological assays
- Assay-specific reporting of results – enables comparison of results with peer group as well as other commonly used assays
- 2 distributions each containing 4 serum specimens per year
- 3-week period for examination and reporting results
- Intended results will be available for viewing on our website, within three days of the distribution closing, and individual report detailing performance analysis, issued within 20 working days
- Scheme supported by qualified and experienced professionals
- Educational
- Country-specific performance analysis provided where sufficient laboratories (from that country) take part
- Participants can request repeat samples free of charge, to assist with investigations in the event of an EQA failure
- This scheme is accredited in accordance with **ISO/IEC 17043:2023**
